

The 3M™ Finesse-it™ System-Box

A portable system for the removal of small scratches and imperfections on paint, perspex and solid surface to achieve perfect finishes. Coordinated components of the system guarantee efficiency and process stability.

The 3M Finesse-it System-Box is ideal for:

- Shop and Trade fair manufacture
- Furniture manufacture
- Kitchen, bathroom and worktop manufacture
- Musical Instrument manufacture

Quick and reliable
for a perfect surface finish

Sanding & Polishing

For a perfect finish, cover the surface using both up and down and side to side movement with a slight feathering motion.

Sanding

To produce an optimal surface finish, use a random orbital sanding motion.

Wet-sanding

The surface must be kept wet during the whole sanding process using the spray bottle.

Checking results

Clean the workspace with the rubber squeegee after each sanding step in order to inspect the finish.

Edge working

Fine sanding in critical areas can be carried out quickly and safely using the 3M™ Hookit™ Semi Hand Pad.

Polishing

The perfect surface finish can be achieved with a rotary random orbital motion.

High Quality Finish

Compound residue streaks can be removed lint-free with the Scotch-Brite™ Polishing Wipe without leaving micro-scratches.

The 3M 260L Hookit Disc is used to begin removing scratches. This is followed by the 3M 443SA Trizact Disc P1000 for intermediate work.

Fine sanding is completed using the 3M 443SA Trizact Disc P3000. These steps reduce surface roughness and minimize the following polishing process. Finally the 3M Finesse-it Finishing Material and 3M Finesse-it Buffing pad (Lambs wool) are used together to polish the surface.

Treatment and repair of laquer systems

Small Defects

Remove small defects with 3M 466LA 35mm Trizact Disc A5. Sand in a circular motion, holding the pad flat to ensure a fine uniform finish. If the defect still exists re-sand as necessary.

Orange Peel / Big Defects

Use the 3M 260L Hookit Disc P1200 with a random orbital sander to remove scratches and "orange peel." Cover the surface using both up and down and side-to-side movement with a slight feathering motion. If the defect still exists re-sand as necessary. The 3M 443SA Trizact Disc P1000 creates a constant and fine sanding pattern whilst the 3M 443SA Trizact Disc P3000 reduces surface roughness and minimizes the following polishing process.

Old Paint

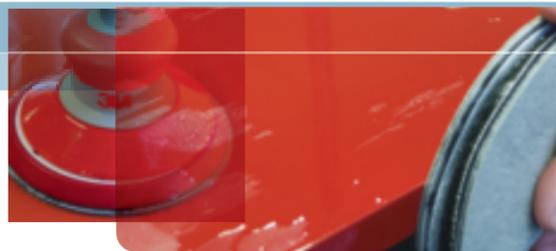

First polish the paint with the 3M Finesse-it Finishing Material and the 3M Finesse-it Natural Buffing pad. Next, polish the surface with 3M Perfect-it III Extra Fine Compound combined with the 3M Finesse-it Foam Polishing Pad for a bright finish. To reach a high gloss finish we recommend using the 3M Finesse-it Ultra Fine Compound in combination with the 3M Perfect-it Hookit Foam Polishing Pad.

New Paint

Polish the paint with the 3M Perfect-it III Extra Fine Compound and the 3M Finesse-it Foam Polishing Pad "Extra Life" for a bright appearance. To create a high gloss finish use the 3M Finesse-it Ultra Fine Compound with the 3M Perfect-it Hookit Foam Polishing Pad.

Holograms

For quick and effective removal of holograms, especially on black/dark paint, the 3M Finesse-it Ultra Fine Compound used in combination with the 3M Perfect-it Hookit Foam Polishing pad is ideal, resulting in a high gloss.
